## *LAB1*

## Task: Build a Simple To-Do Application with CRUD Functionality

### Objective:

Develop a basic To-Do application that allows users to perform the following operations:

***Be strict with names like your class should name (ToDo) and method like this :***

- **Create** new tasks.
- **Read** (view) existing tasks.
- **Update** tasks to modify their content or status.
- **Delete** tasks that are no longer needed.

### Bonus Objective:

- Implement a feature to track the number of users interacting with your application.

### Submission Instructions:

- Package your code in a Python file named `[your_name]_lab_1.py.`
- Upload your completed project to the following Google Drive folder: [Submission Link](#).

Happy Hacking :)
